

# Library in a Week: Algorithms in C++11

Jeff Garland

C++Now – May 2012

# Alternate Title:

Why C++11 is the awesomest  
language to Write & Write Algorithms!

Nod to Chris Kohlhoff ([boost.asio](http://boost.asio))

# What is this session?

## ■ Goals

- ☐ Build Boost library extensions
- ☐ Enlarge the developer community
- ☐ Opportunity to work collaboratively on useful capabilities
- ☐ Learn by doing
- ☐ Learn more about Boost tools and development standards
- ☐ Learn more about C++11 features

# Ways to participate

- Please participate!
  - ☐ Session(s) are meant to be interactive
  - ☐ Shaped/run by the participants
- Things you can do
  - ☐ Research, Write, Present an Algorithm
  - ☐ Write documentation
  - ☐ Write tests
  - ☐ Come to morning sessions and provide input

# STL Algorithms Review

## ■ Non-Mutating

- ☐ for\_each
- ☐ find
- ☐ find\_if
- ☐ adjacent\_find
- ☐ find\_first\_of
- ☐ count
- ☐ count\_if
- ☐ mismatch
- ☐ equal
- ☐ search
- ☐ search\_n
- ☐ find\_end

## ■ Mutating

- ☐ copy
- ☐ copy\_n
- ☐ copy\_backward
- ☐ Swap
- ☐ swap
- ☐ iter\_swap
- ☐ swap\_ranges
- ☐ transform
- ☐ Replace
- ☐ replace
- ☐ replace\_if
- ☐ replace\_copy
- ☐ replace\_copy\_i  
f
- ☐ fill
- ☐ fill\_n
- ☐ generate
- ☐ generate\_n

## ☐ Remove

- ☐ remove
- ☐ remove\_if
- ☐ remove\_copy
- ☐ remove\_copy\_i  
f
- ☐ unique
- ☐ unique\_copy
- ☐ reverse
- ☐ reverse\_copy
- ☐ rotate
- ☐ rotate\_copy
- ☐ random\_shuffle
- ☐ random\_sample
- ☐ random\_sample\_n
- ☐ partition
- ☐ stable\_partition

# STL Algorithms Review

## ■ Sort

- ☐ [sort](#)
- ☐ [stable\\_sort](#)
- ☐ [partial\\_sort](#)
- ☐ [partial\\_sort\\_copy](#)

## ■ [nth\\_element](#)

## ■ Binary search

- ☐ [lower\\_bound](#)
- ☐ [upper\\_bound](#)
- ☐ [equal\\_range](#)
- ☐ [binary\\_search](#)

## ■ [merge](#)

## ■ [inplace\\_merge](#)

## ■ Set operations on sorted ranges

- ☐ [includes](#)
- ☐ [set\\_union](#)
- ☐ [set\\_intersection](#)
- ☐ [set\\_difference](#)
- ☐ [set\\_symmetric\\_difference](#)

## ■ Heap operations

- ☐ [push\\_heap](#)
- ☐ [pop\\_heap](#)
- ☐ [make\\_heap](#)
- ☐ [sort\\_heap](#)
- ☐ [is\\_heap](#)

## ■ Minimum and maximum

- ☐ [min](#)
- ☐ [max](#)
- ☐ [min\\_element](#)
- ☐ [max\\_element](#)

☐ ETC!

# C++ 11 – New Algorithms

## ■ Sort

- ☐ [is\\_sorted](#)
- ☐ [is\\_sorted\\_until](#)
- ☐ [partial\\_sort\\_copy](#)

## ■ Mutating

- ☐ [copy\\_if](#)
- ☐ [copy\\_n](#)
- ☐ [copy\\_backward](#)
- ☐ Move
  - ☐ [move](#)
  - ☐ [move\\_n](#)

## ■ Heap operations

- ☐ [is\\_heap\\_until](#)
- ☐ [Is\\_heap](#)

## ■ Minimum and maximum

- ☐ [minmax](#)
- ☐ [max](#)
- ☐ [min\\_element](#)
- ☐ [max\\_element](#)
  
- ☐ ETC!

# C++11 Algorithm Usage

## ■ Check collection for element

```
#include <algorithm>
#include <string>
```

```
bool is_green( const std::string& s )
{
    return ( s == "Green" );
}
```

```
int main()
{
```

```
    std::vector<std::string> vs = {"Red", "Green", "Blue", "Orange"};
```

```
    if ( std::all_of(vs.begin(), vs.end(), is_green) ) {
        //....
    }
```

# C++11 Lambdas

```
#include <algorithm>
#include <string>
```

```
int main()
{
```

```
    std::vector<std::string> vs = {"Red", "Green", "Blue", "Orange"};
```

```
    if ( std::all_of ( vs.begin(), vs.end(),
```

```
        [] (const std::string& s) {return s == "Green";} ) ) {
```

```
        //....
```

# C++11 Challenge: what's this?

```
int min_val = std::min( { 1, 2, 3, 4, 0 } );
```

```
// min_val == 0 -- of course...
```

```
T min ( initializer_list<T> t )
```

# The Problem

- STL and C++11 Algorithms only scratch the surface
- Ideally Boost would contain large collection of additional useful algorithms
- One purpose of workshop is to build up the algorithm collection in Boost.Algorithm

# What is Boost.Algorithm?

- An official Boost Library – Marshall Clow
  - To be added in Boost 1.50
  - Provides C++11 and other algorithms
  - Marshall wants your contributions!
- Other related libraries
  - String Algo – string algorithms
  - Range – variety of range based stl algorithms

# Extending Algorithms - Range

//Range variant

```
template<class Collection, typename Function>
bool all_of(const Collection& c, Function f)
{
    return std::all_of(c.begin(), c.end(), f);
}
```

```
if (all_of( vs, [](const std::string& s) {return s == "Green";}))
{
    //...
```

# Ranges

- Boost.Range provides for simplification of writing for collection
- Volunteer to give mini-tutorial (10 minutes) tomorrow?

# Approximate plan

- day 1: Get Organized
  - Selection of focus algorithms
  - Assignments and teaming
- day 2: Selected Presentations
  - Algorithm sketches / Illustrations of C++11 Code
- day 3: Code and docs
  - Algorithm Presentations and Review
- day 4: Coding and Any Redesign
  - Algorithm Presentations and Review
- day 5: Wrap up – future directions

# Algorithm Technical Brainstorm

- What algorithms would you like to see?
  - Howard's list (combinations, permutations)
  - Random sample (not really in 2003, in sgi)
  - Adobe libraries
  - Tuple algorithms (see boost.fusion)
  - Levenstein distance...
  - Depth\_first\_search
  - Boost::process – side session...

# Algorithm Technical Brainstorm

- How can C++11 features be used to write algorithms?
- Challenge: extend a std or boost algorithm using C++11

# For Tuesday

- Sebastion: Overview of Boost.Range
- Sean Parent: Overview of Adobe ASL
- Others...

# Resources

- Boost.Algorithm

- <https://github.com/mclow/Boost.Algorithm>

- Boost Range

- [http://www.boost.org/doc/libs/1\\_49\\_0/libs/range/doc/html/index.html](http://www.boost.org/doc/libs/1_49_0/libs/range/doc/html/index.html)

- Adobe Source Libraries (ASL)

- Open source C++ library

- Uses elements of Boost

- Provides some additional algorithms:

- [http://stlab.adobe.com/group\\_algorithm.html](http://stlab.adobe.com/group_algorithm.html)

- SGI STL

- Provides some additional algorithms beyond STL

- [http://www.sgi.com/tech/stl/table\\_of\\_contents.html](http://www.sgi.com/tech/stl/table_of_contents.html)
